## DETAILED ACTION

### ***Claim Rejections - 35 USC § 112***

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 1-12 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Claim 1 sets forth a liquid thermosetting vinyl terminated fluorine-containing polysiloxane. However, the examiner is unable to find support for the limitation that the vinyl terminated fluorine-containing polysiloxane is of a liquid thermosetting nature in the specification.

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claims 1-12 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

For claims 1-12, applicant sets forth an organosilicon polymer gel. However, applicant specifies that the components that make up the "gel" are both liquid. It is unclear how a gel would be present if all of the components present were liquid.

Art Unit: 1712

***Response to Arguments***

5. Regarding applicant's arguments related to the Barnum et al. reference (U.S. Patent No. 5,171,817), the examiner agrees that Barnum does not teach the presence of a liquid thermosetting vinyl terminated fluorine-containing polysiloxane component. Barnum requires an elastomeric component. Therefore, the rejections set forth using this reference have been withdrawn. However, as noted above, the examiner was not able to find support for applicant's amendment to claim 1 inserting liquid thermosetting before vinyl terminated fluorine-containing polysiloxane. As a result, were this limitation to be removed, the examiner would reinstate the rejections involving the Barnum reference. The rejections set forth in the previous office over the other references cited therein have been withdrawn in light of applicant's amendments to the claims.

6. Regarding the information disclosure statement submitted on 11/3/03, the Liebfried, Sr. (U.S. Patent No. 5,196,498) reference was crossed out because it had previously been cited by applicant.

***Conclusion***

7. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within

Art Unit: 1712

TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
